ABSTRACT

2 A gutter retaining system for affixing a gutter under the eaves of a building. The
3 gutter retaining system incorporates a gutter clip with a gutter and retaining member.
4 The retaining member is placed along the eaves. The gutter clip has an L-portion and a
5 back portion. The back portion includes an upper u-portion with a hanger used to slip
6 the gutter clip over the gutter to secure it to the gutter clip. The gutter clip has a nib
7 end with a locking tip. Nib end fits within retaining member to secure gutter clip and
8 gutter in place along the eaves. L-portion fits between the gutter and building where an
9 additional piece of board is included in the construction. The gutter clip is scored
10 between the back portion and L-portion allowing separation, such as when no
11 additional piece of board is found along the eaves.
